

PIEGA Automotive - Driving Excellence in Sound.

Ribbon Tweeters & Midrange Drivers from Switzerland: At PIEGA Automotive, we bring decades of high-end audio expertise to the world of premium vehicles. Our mission: to deliver uncompromising sound precision and a truly unique listening experience — transforming every drive into an audiophile journey.

PIEGA's ribbon technology meets the automotive requirements for weight, recyclability, and environmental compatibility – backed by IATF 16949-compliant production and a reliable supply chain.

THE PIEGA SOUND EXPERIENCE — INSIDE THE VEHICLE

- **The Fascination of Ribbon Technology** – Natural Voices, Exceptionally Pure in the Delicate Midrange Through to the Highest Frequencies
- **Impeccable Microdynamics** - Thanks to the ultra-light diaphragm and extremely fast transient response, even the finest sound details are reproduced without harshness
- **Dynamic and Uncompromised** - Unlike traditional drivers, our ribbons are free from thermal compression caused by coil heating, preserving dynamics even at high volumes

WHY RIBBON TECHNOLOGY

- In ribbon drivers, the membrane is the voice coil: Extremely low moving mass of approx. 0.03 g combined with a strong magnetic field results in an outstanding performance-to-weight ratio
- Typical Nonlinearities Eliminated: Conventional driver issues such as asymmetric drive and suspension, voice coil inductance, and thermal compression are avoided
- The result: Natural vocals, precise transients, and consistent tonality — day after day

WHY PIEGA

- 40 Years of Ribbon Expertise - Swiss-made ribbon drivers, handcrafted with decades of experience
- World-Unique Coaxial Ribbon System - Precise sound through perfectly aligned high- and mid-frequency membranes
- Award-Winning Sound Quality - Acclaimed by experts and the press, and highly valued by our customers
- Premium & Global Presence - Strong position in the high-end audio segment worldwide
